

DIY Challenge

CAREER CONNECTION

If you like making board games, you may also enjoy the challenge of creating video games. Two main careers in the video game industry include video game design and video game programming. Video game designers design the visual aspects of video games, and video game programmers write the code that controls the game!

HOW CAN YOU MAKE LEARNING FUN?

1. Choose a specific topic that interests your family—from rainforest animals to storm patterns to eco-friendly transportation... The sky's the limit!
2. Research, research, research! Record fun, interesting, and bizarre facts as you learn more about your subject.
3. Design a game that will teach players about the topic you selected. In addition to making game pieces and a game board, be sure to also write directions and create an eye-catching box!
