Exploration and Discovery

CAREER CONNECTION

Do you want to help humans explore space? You may be interested in a job in aerospace. Aircraft maintenance technicians (AMTs) are responsible for performing repairs and preventative and routine maintenance on all types of aircraft. You could help build the spacecrafts we need to rocket out of this world.

How long would it take to drive to the moon from your hometown?

Fermi problems require you to make a quick estimate of a quantity that seems difficult or impossible to determine precisely. They were named after Enrico Fermi, the Italian physicist who used this problem solving method to predict how atoms would work long before scientists had the technology to actually see atoms. Fermi problems emphasize the **process** of solving problems over getting the exact answer.

STEPS IN SOLVING THESE PROBLEMS

1. What is the question asking you to do?
2. Make a wild guess!
3. Make an educated guess using a line of reasoning and calculations based on your experiences and estimations.
4. Gather data to help you make a better educated guess. This includes performing experiments, measuring, and searching for data to help your make a more precise estimate.
5. Write a conclusion. State your final answer with possible sources of error. List facts your learned and other questions you still have.
